

## S-36 FlexArm Designed for Job Shops

The S-36 was designed to simplify a job shop's tapping needs. The ability to tap from 0-80 to 9/16" in steel provides the versatility a job shop needs to stay competitive. With a working range of 14" to 51", the S-36 stays perpendicular anywhere it is moved on the table. The S-36 was also built with strength and durability in mind to allow for years of repetitive usage. A larger motor is available to increase the tapping capacity to 3/4".

FlexArm offers a 30 Day Trial on all units.
