

## FlexArm Reduces Material Handling Costs

The FlexArm M-60 unit shown above is mounted on a rolling table. The unit can easily be moved anywhere on the shop floor and is powered by shop pressure at 90 PSI. Instead of moving the parts to the next work station to be tapped or deburred, the FlexArm is positioned where more complicated operations are being done to reduce material handling costs. The unit has the ability to tap from 0-80 to 9/16" in steel and provides the versatility a job shop needs to stay competitive. With a working range of 22" to 76", the M-60 stays perpendicular anywhere it is moved on the table. Larger FlexArms are available to increase the tapping capacity to 2". FlexArm offers a 30 Day Trial on all units.
