

FlexArm

FlexArm Assembler With Helicoil

The FlexArm is designed to counter balance the tool weight and to hold the tool perpendicular to the working surface. By using the FlexArm, companies can reduce operator fatigue, increase productivity and maintain consistency and accuracy with operations. The FlexArm Assembler requires very little experience and maintenance and can be used with such applications as Helicoil insertion, nut running, screw driving and light assembly.

Call today for information. We are confident that our arms will save both time and money.
